OP = one-pager = basic unit of the Roadmap that describes a specific activity or project related to cancer control. One-pagers are categorized sorted according to their domains and subdomains (topics that they cover), types of action and sources (countries or joint actions)

Menu and structure

The screenshot shows the iPAAC Roadmap website. At the top is a dark blue header with the iPAAC logo and a navigation menu: HOME, ABOUT, CALENDAR, NEWS, PARTNERS, WORK PACKAGES, OUTCOMES, MEDIA, CONTACT, INTRANET. Below the header is a large blue section titled "Roadmap". Underneath "Roadmap" is a white navigation bar with a home icon and links: ROADMAP GUIDE, LIST OF COUNTRIES, LIST OF DOMAINS, ABOUT ROADMAP. Below this is a search bar with the text "Smoking" and a "SEARCH" button. Further down are two tabs: "Browse by domains" (selected) and "Browse by countries or joint actions". The main content area displays four domain cards: "Primary prevention and health promotion (26)", "Cancer screening (14)", "Diagnostics and treatment (21)", and "Cancer care (28)". Each card lists its subdomains with counts. Yellow arrows point from text boxes on the right to specific features: "Roadmap main navigation" points to the top navigation bar; "Fulltext search" points to the search bar; "Selection of browsing mode (domains/countries)" points to the tabs; and "Browsing through domains and subdomains" points to the domain cards.

and subdomains

Roadmap main navigation

- Access to general information, documentation, code lists

Fulltext search

- Type the searched term, e. g. "lung cancer" or "tobacco"

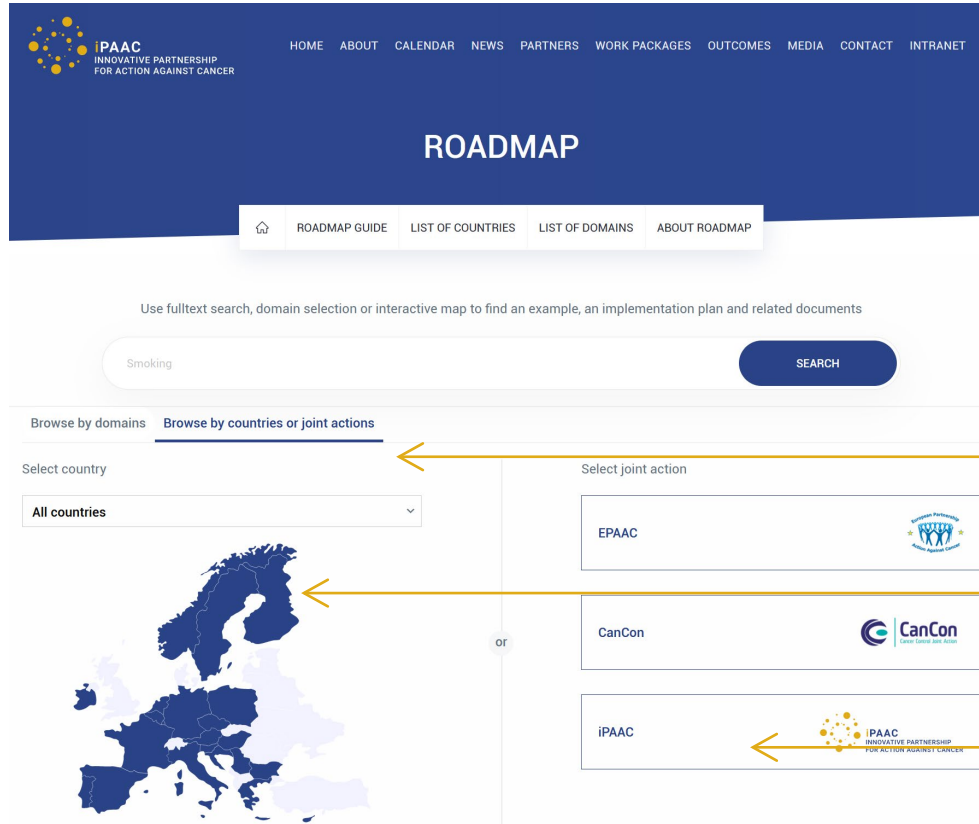

Browse by domains

- Enables browsing one-pagers categorized according to their topics (domains)

Browse by domains

- Enables browsing one-pagers categorized according to their "sources" – countries or joint actions

Menu and structure

Selection of browsing mode
(domains/countries)

Browsing through OPs that
are “country-based”

Browsing through OPs that
were developed within the
joint actions

- Selection of a country in the drop-down list or in the map provides equal results – a list of one-pagers that come from that particular country
- Country-based OPs arise from individual countries and describe national or regional activities.
- OPs from joint actions were developed as outputs of three joint actions and are not related to any country or region.

Horizon Scanning Systems (HSS): Tools to Better Anticipate Innovative Cancer Therapies and Their Potential Clinical, Economic and Organizational Impacts

Filters to obtain a more specific list within the given domain

You are staying within the particular domain and the Domain drop-down menu is therefore disabled

Click anywhere in this frame to display the OP detail

- One-pagers are listed according to subdomains; the subdomains are ordered in the same manner as on homepage
- Filters are used in the same manner within the entire Roadmap tool
- When using any filter, only OPs from the originally selected domain ("Diagnostic and treatment" here) are displayed. For example, when Belgium is selected in the Country drop-down, only Belgian OPs included in the "Diagnostics and treatment" domain are displayed.

WE CAN QUIT (WCQ): SMOKING CESSATION IN IRELAND

[Home](#) [ROADMAP GUIDE](#) [LIST OF COUNTRIES](#) [LIST OF DOMAINS](#) [ABOUT ROADMAP](#)

[Back to search](#) Country/JA:  **Ireland** Action type: **Program**

Problem: Tobacco use is the leading cause of preventable death in Ireland, with nearly 6,000 people dying from tobacco related illnesses each year. Smoking prevalence is declining nationally, however areas of disadvantage are disproportionately impacted, experiencing higher prevalence rates than that of more affluent areas.

Objective: The 'We Can Quit' (WCQ) program was developed in 2013 to tackle some of these health inequalities, with a particular focus on the growing rate of lung cancer among women living in these communities.

Implementation status: Implementation is complete and programme is ongoing

Key Contextual Factors

- The Health Service Executive's (HSE) Tobacco Free Ireland Programme manages WCQ, which was initially developed by the Irish Cancer Society (ICS).
- WCQ is delivered in the community by community partners who manage the delivery aspect through funding provided by the HSE. Partners include, Local Area Partnerships, County Councils, Family Resource Centres and other community organisations.
- Due to the COVID-19 pandemic, the WCQ programmes are being delivered online. This has created additional challenges, including the implications of digital poverty and prolonged isolation. WCQ takes a holistic approach to health and by its nature, tackles many of the other health and societal issues related to smoking.

Key Components/Steps

Pilot delivered by ICS in 2014 across 5 communities in partnership with the HSE, National Women's Council of Ireland, the institute of Public Health and community partners in North County Dublin. This was followed by continuous progress each year and periodic evaluations:

- 2014 – 2 partners, delivered 5 courses, with 39 women registrations
- 2015 – 2 partners delivered 7 courses, with 92 registrations
- 2015 – evaluation: "Findings from the Action Research Study", 2015, University of Stirling
- 2016 – 7 partners (3 partners in Cork and 4 in Dublin) delivered 14 courses with 145 registrations
- 2017 – 7 partners delivered 19 courses, with 232 registrations
- 2017 – evaluation: "Findings of WCQ Programme" February 2015 to October 2016, Trinity College Dublin
